Hi again!

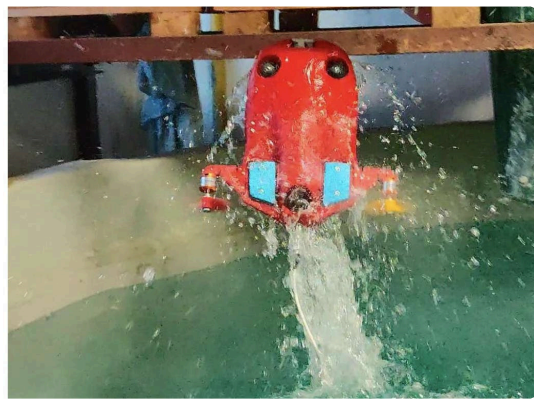

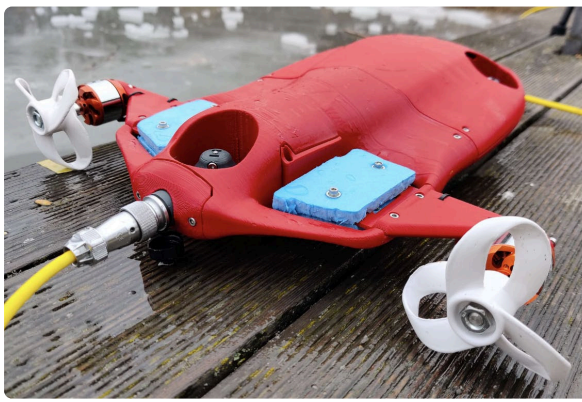

As I mentioned in the previous e-mail, today I'll talk about how you can customize the CPS 5. There is a couple of ways to do that.

First of all, **you can use the modular connector**. It's a special kind of connector we designed for the CPS 5 so that you can add anything you like to the drone, with minimal effort. Here's how a **GoPro module** looks like:

Double vision mounted

If you want to make the drone **a lot faster** for example, we also got you covered. We made the **CPS 5S**, which can reach **3m/s** (super fast). It was in fact **so fast, that we totally destroyed it** (we crashed it into the wall). Here are some photos of the modification:

If you'd like your own **ridiculously fast drone**, we also included this mod in the **CPS 5 course**! Click below to see the whole build video of CPS 5S:

If you build the drone yourself, **you'll definitely have enough understanding of it to add your own modifications to it** - these are just a couple of examples :)

Ready to try out the course?

Cheers,

Piotrek, CPSdrone

PS: Tommorrow, I'll finally show you drones built by our students!
